

IT'S TIME WE STEP UP

The building industry is one of the largest greenhouse gas emitters, and a massive change is needed right now to mitigate climate change over the coming years and decades. Australia is already suffering the effects of prolonged drought, more frequent and intense bushfires and damaging storms. We, as fire safety engineers, believe we are a part of the solution to the problem.

More timber, well-insulated buildings, green facades and integrated solar panels are much needed and we are up for the fire safety challenges that come with it.

We hope you want to join us and be a part of a sustainable and profitable building industry, and we are open for discussions on how we best can collaborate to make this happen.

Please don't hesitate to reach out and discuss this with us.
We need you!
